

**Temporary loop-ileostomy for distal anastomosis protection in colorectal resections**

A.E. Nicolau

Spitalul Clinic de Urgență București, România

**Abstract**

Temporary loop-ileostomy (TLI) is an efficient modality to protect distal anastomosis in colorectal resections. TLI reduces the consequences of distal anastomosis leakage. We present the technique of construction and closure of TLI, the indications, postoperative complications and personal experience in early closure.

Key words: temporary loop-ileostomy, construction, closure
